FOR IMMEDIATE RELEASE

July 2005 – In preparation for their 12th anniversary, NetMedia, Inc. of Tucson, AZ., has announced the release of a new “bullet” style, high resolution modulated security camera. Each camera features a machined, billet aluminum housing for sturdy, weather-resistant outdoor applications. The cameras are designed to be durable, functional, secure and stylish. To increase coverage area, the cameras have the option of being mounted on the wall or ceiling, enabling vertical adjustment and 360 degrees of rotational adjustment. For maximum security, the cabling is routed internally with tamper-resistant wiring. NetMedia offers the cameras in B/W, color or IR sensitive models and are available in several housing colors; white, silver, black and ivory. The cameras feature excellent, image quality lenses with low light capability, making them ideal for indoor or outdoor use. NetMedia’s exclusive “One Wire Installation” for viewing multiple surveillance cameras on multiple televisions is available on the **NM-MODCAM** models, allowing for power and modulated video to run on a single coax cable. Simplify installation with just one wire! These cameras are available through distribution only. For complete specifications and features by model, visit the NetMedia website or contact NetMedia for the name of a distributor near you.
