FOR IMMEDIATE RELEASE

May 2005 - NetMedia, Inc., of Tucson, Arizona announces the introduction of a new "bullet" style, high resolution security camera. Each camera features a durable, machined, billet aluminum housing for sturdy weather-resistant outdoor applications. The NM-VIDCAM is designed to be durable, functional, secure and stylish. The camera's angles are adjustable vertically and in a 360 degree rotation, increasing angles of coverage and allowing the option of a wall or ceiling mount. For maximum security, the cabling is routed internally with tamper-resistant wiring; out of reach from animals or wire cutters. The cameras are available in either black & white, color or IR color models and are offered in several housing colors; white, ivory, black and silver. Other features include an excellent, image quality lens, (37mm), with low light capability, making them ideal for indoor or outdoor use. The power supply is included and the products carry a one year warranty. For specifications and features by model, call for a brochure or click on [products](#) while visiting their website. The "bullet" security cameras are available through distribution only. Visit the NetMedia website or contact NetMedia for the name of a distributor near you.
